Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary**Application No.**

10/777,802

Applicant(s)

ZHONG, SHENG-PING (SAMUEL)

Examiner

HASAN AHMED

Art Unit

1615

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 February 2011.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3, 10-17 and 19-28 is/are pending in the application.
- 4a) Of the above claim(s) 10-16, 20, 24 and 26 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3, 17, 19, 21-23, 25, 27, and 28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-946)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB-08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Receipt is acknowledged of applicant's remarks, filed on 22 February 2011.

* * * * *

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 17, 19, 21-23, 25, 27, and 28 remain rejected under 35 U.S.C. 103(a) as being unpatentable over WO 2003/026532 ("Weber") (currently of-record) in view of U.S. Patent No. 6,743,463 ("Weber II") (currently of-record), further in view of U.S. 5,998,528 ("Tsipursky").

Weber teaches a medical article comprising a release region (*see* page 2, lines 22-28), further comprising:

- the implantable or insertable medical device of instant claim 1 (*see* page 20, lines 16-21);
- the polymeric carrier comprising a first hydrophobic polymer (e.g. polyolefin) of instant claim 1 (*see* page 8, lines 5-15);
- the drug loaded nanoparticles dispersed within the polymeric carrier of instant claim 1 (*see* page 5, line 18; page 10, line 27; page 11, lines 14-16);
- the layered silicate material (phyllosilicate) of instant claim 1 (*see* page 9, line 4);

- the hydrophilic therapeutic agent of instant claim 1 (*see* page 11, line 17 – page 12, line 6; *e.g.* acetylsalicylic acid);
- the hydrophobic first polymer of instant claim 1 (*see* page 8, lines 5-15; *e.g.* polyolefin block copolymer);
- the disposal over at least a portion of the medical article substrate of instant claim 17 (*see* page 10, lines 24-26; figure 1);
- the coronary or peripheral vasculature implantable or insertable medical device of instant claim 19 (*see* page 20, lines 16-21);
- the catheter of instant claim 21 (*see* page 20, line 19);
- the antithrombotic agent of instant claim 22 (*see* page 11, line 18);
- the smectite silicate material of instant claim 23 (*see* page 9, line 4);
- the method of instant claim 25 (*see* page 6, lines 3-15);
- the overlapping cross-sectional length of instant claim 27 (*see* page 8, line 20); and
- the olefin polymer of instant claim 28 (*see* page 8, lines 5-15).

Regarding the hydrophilic second polymer of claim 1 (*see* page 8, lines 5-15; *e.g.* polyacrylics); it is noted that Weber teaches that the matrix material can be a polymer blend (*see* page 8, line 4) – as such, Weber envisions using a combination of any of the matrix materials listed in the subsequent paragraph (*see* page 8, lines 5-15) which includes a hydrophobic polymer such as a polyolefin block copolymer and a hydrophilic polymer such as a polyacrylic polymer).

Weber explains that the disclosed device is beneficial because it provides targeted and controlled delivery of therapeutic agents to a desired treatment site (*see* page 11, lines 5-6).

Weber does not disclose the spacing between adjacent layers within the silicate particles recited in instant claim 27. However, Weber teaches use of the same silicate as the instant application, *i.e.*, smectite silicate (*see* page 9, line 4), and spacing between adjacent layers is an inherent feature of the silicate.

Weber differs from the instant application in that it does not teach halofuginone as a therapeutic agent.

Weber II teaches an insertable medical device, such as a stent (*see* col. 2, line 27). The device may be coated with a hydrophobic polymer (reading on the polymeric carrier comprising a hydrophobic first polymer of instant claim 1) (*see* col. 9, lines 24-60). Disclosed hydrophobic polymers include polyurethanes, polysiloxanes, styrene-isobutylene copolymers, polyolefins, polyisobutylenes, ethylene-alphaolefins, acrylic polymers, polyamides, polycaprolactones, etc. (*see* col. 9, lines 31-60) (reading on claim 28). The coating formulation may further comprise a nanocomposite comprising nanoclay particles (*see* col. 10, line 19) and with a biologically active material (*see* col. 10, lines 51-52) such as halofuginone (*see* col. 12, line 7) (reading on claim 3) and a hydrophilic polymer, such as albumin, carbohydrate, or polysaccharide (*see* col. 13, line 2) (reading on the hydrophilic second polymer of claim 1).

Weber and Webber II do not explicitly disclose the placement of the therapeutic agent in the spaces between adjacent layers of the silicate material of each silicate

Art Unit: 1615

particle to form a depot. However, the placement of a hydrophilic therapeutic agent and a hydrophilic polymer in the spaces between the adjacent layers of the silicate material is a property of interaction between the silicate and the hydrophilic therapeutic agent and polymer, as explained by Tspursky (see col. 5, lines 9-19):

It is theorized that polar moieties from the intercalant molecules, which complex to the interlayer cations in the interlayer spaces between the platelets of the layered material, also complex with the added cations, and the complexed metal salt-derived cations carry their dissociated anions along with the cations, in the interlayer space, in order to maintain charge neutrality within the interlayer spaces of the layered material. It is theorized that such double intercalant complexing (intercalant with interlayer cations and with cations from the added metal salt compound) occurs on adjacent, opposed platelet surfaces, resulting in repulsion between closely spaced dissociated anions carried by the added cations, resulting in increased basal spacing and more complete exfoliation using less intercalant.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to disclose an implantable or insertable medical device comprising a polymeric carrier comprising a hydrophobic first polymer and drug loaded nanoparticles dispersed within said polymeric carrier, said drug loaded nanoparticles comprising a layered silicate material and a hydrophilic first therapeutic agent (such as halofuginone) and hydrophilic second polymer, as taught by Weber in view of Webber II further in view of Tspursky. One of ordinary skill in the art at the time the invention was made would have been motivated to make such a composition because it provides targeted and controlled delivery of therapeutic agents to a desired treatment site, as explained by Weber (*see above*).

Response to Arguments

Applicant's arguments filed on 22 February 2011 have been fully considered but they are not persuasive.

1. Applicant argues that the disclosure in Weber, cited in the substantive rejection, of a polymer blend comprising a hydrophobic first polymer and hydrophilic second polymer and of phyllosilicates would have to be chosen out of multiple disclosed materials. See remarks, paragraph bridging pages 7 and 8, and page 9, first paragraph.

In response examiner respectfully submits that the materials being claimed are explicitly disclosed in the reference, as explained in the substantive rejection. The selection of a known material based on its suitability for its intended use supported a prima facie obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945). MPEP 2144.07

2. Applicant argues that polyacrylic polymers can be hydrophilic. See remarks, page 8, second paragraph.

In response, examiner respectfully submits that the instant application itself describes acrylic polymers as hydrophilic; for example, polymers and copolymers of acrylic and methacrylic acid and polymer and copolymers of methacrylamide are cited as examples of hydrophilic polymers at [0043] of the instant specification, as filed.

3. Applicant argues that Weber II does not appear to describe, in combination, a hydrophilic polymer and a hydrophobic polymer. See remarks, page 9, second paragraph.

In response, examiner respectfully submits that Weber was invoked for the teaching of a hydrophilic polymer and a hydrophobic polymer combination. However, as stated in the substantive rejection, Weber II also teaches hydrophobic polymers such as polyurethanes (see col. 9, lines 31-60) and hydrophilic polymers such as albumin (see col. 13, line 2).

4. Applicant argues that the system in Tspursky is totally unrelated to the system proposed by the Examiner on the basis of Weber and Weber II. See remarks, page 10.

Examiner respectfully submits that Tspursky was invoked for the specific purpose describing the interactive properties of interlayer cations with interlayer spaces in order to explain the inherent property of the placement of a hydrophilic therapeutic agent and a hydrophilic polymer in the spaces between the adjacent layers of a silicate material vis-à-vis the interaction between the silicate and the hydrophilic therapeutic agent and polymer.

* * * * *

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1615

shortened statutory period **will** expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) **will** be calculated from the mailing date of the advisory action. In no event, however, **will** the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
